

## ULTRAVIOLET GERMICIDAL IRRADIATION (UVGI)

Model: UVGI LEO-11  
Lightwave: UV-C primarily in the 253.7nm wavelength  
UV intensity @ 1 meter: 320,000  $\mu\text{w}/\text{cm}^2$   
Bulb lifespan: 8,000 operational hours  
Ballast lifespan: 20,000 operational hours  
Bulb length: 810mm  
Power of bulb: 120 watts  
Power of unit: 120 watts  
Voltage: AC220-230V, 50Hz  
Efficient area: 50 square meters

Features:  
A timer setting + remote operation  
Ozone option available

Product dimension: 243x243x843mm  
Net weight: 2.05kgs

### Structural Representation and Schematic Diagram

Remote controller

1. Press the ON/OFF button
2. Optional disinfection time (15min/30min/60min)
3. Press the power button again (the light on after 30 seconds)

The best way to mitigate against airborne viruses, yeast, fungi, bacteria and mold

**UVGI LEO-11**

**What UVGI / UVC technology can do:**

Scientific evidence confirms that Clostridium difficile, MRSA, VRE, Acinetobacter baumannii, and influenza are transmitted via environmental surfaces. Studies indicate that only 50% of environmental surfaces in a typical operating room suite or patient room care in hospitals are effectively disinfected. Hence a patient’s risk of contracting a Hospital Acquired Infection (HAI) from contaminated surfaces increases when the previous room occupant was infected.

- Mobile ultraviolet light (UV-C) unit significantly reduces aerobic colony counts and C. difficile spores on contaminated surfaces in hospitals.
- System for clinical & domestic applications to perform a proper air and surface sterilization against microbial contamination.
- Effective in the eradication of dust mites and bed bugs when used periodically.
- Prevention against indoor air contamination such as bacteria, mold, yeast and fungi.
- Decontamination of patient rooms, hotel rooms, meeting rooms etc... using an automated mobile UVC Light Unit.
- Short wavelength sterilization method to break down microorganisms in food and water.
- Variety of applications, such as food, air and water purification.
- UV radiation destroying nucleic acids in organisms to destroy their DNA.
- Deadly effect on micro-organisms, pathogens, viruses and molds.
- Sterilize drinking- and wastewater.
- Air sanitization and purification.

Class room

X Ray room

CT room

Office

Hospital Ward

Reception area

Food Storage Areas  
Kitchen

Minor OT theatre

**Benefits:**

- Effective in the mitigation against virus ie COVID-19, Tuberculosis, MRSA, H1N1 and other airborne cross contamination.
- Eliminates 99.9% of virus, bacteria, yeast and mold problems found in hospitals, schools, food processing plants and offices.
- Recommended by medical experts.
- Eliminates odours and neutralizes the air.

**Applications and locations where to implement :**

- Clinical environments such as clinics, hospitals, dental surgery, schools, holding facilities, hospital reception area, wards, minor OT, X ray room, CT scan room, dialysis center.
- Food processing plant and food storage facilities (cheese, wine, vegetable, fruit, meat, etc..).
- Office, open office concept, bank, beauty saloon,
- Laboratories, testing facilities and diagnostic screening centre that require a clinically clean environment.
- Colleges, kitchen, hall, class room, eating centre.
